#### Transcript:

0:00

we're going to see uh a lot of starvation and of course this leads to pandemic we'll have real

0:06

pandemics because again when you have many people starving they're uh first of all they start migrating and eating

0:12

things they don't normally eat and their immune systems are depressed anyway bottom line is every time you get big

0:18

famines you get big pandemics well good then we can lock everybody then we can lock everybody down again eh that'd be

0:24

real fun we can lock everybody down again like they did in shanghai and then we can disrupt the supply chains any

0:31

even more and then we can starve a bunch more people and maybe we will settle out with 600 million people and have a

0:36

sustainable planet you know with all those 600 million people living in the ashes and the skeletons

0:48

[Music]

0:56

hi everybody it's my pleasure and privilege today to be speaking with correspondent michael yawn i reached out

1:03

to michael because i've been extremely interested in the european civil protests specifically those centering in

1:10

at the moment in the netherlands inspired in no small part by the canadian truckers convoy

1:17

those those protests are receiving short shrift and minimal coverage in what has

1:23

been come to known as the legacy media which is more and more uh

1:29

in a collusional relationship let's say with the with the globalist utopians who

1:34

are attempting to guide our destiny so destructively and unsuccessfully i reached out to michael because i want

1:40

to find out to the degree that i can what's going on particularly in the netherlands and more broadly in europe

1:46

and around the world and he's a cardinal person to talk to in this regard and he's a very

1:52

interesting person in his own right uh for all sorts of reasons which we'll get into as we progress michael was one of

1:58

america's youngest green berets that's not an easy thing to manage at 19 years old he spent more than half his life

2:05

overseas in more than 80 countries so he's been everywhere man and has seen

2:11

many things mr yon is also the author of three books published in the united states including

2:17

moment of truth in iraq 2016 and three others in japan

2:23

covering among other topics the present and developing information war

2:28

with china he is america's most experienced combat

2:34

correspondent uh not necessarily a title for the faint of heart let's say most recently as i said and this is the

2:40

proximal reason for this discussion michael has been tracking and covering the rising tide of civil disobedience in

2:46

the netherlands and elsewhere in europe so thank you michael very much for coming in to talk to me today i

2:52

understand that you're in the netherlands right now you've been there for a couple of weeks and so tell us a little bit about yourself and and what

2:58

why you're in the netherlands and what you've been seeing and what you think it means

3:04

yes sir jordan and thank you for inviting me on i've watched your show for years now it's it's incredible to

3:09

come on yeah and you you mentioned the canadian uh truckers that their courage

3:14

cannot be and their inspiration cannot be understated uh you know courage is courageous as is cowardice and so we

3:21

must display courage uh recently some months ago earlier this year i drove from california to

3:28

washington dc with american truckers who were inspired by canadian truckers and they were flying canadian flags these

3:34

are american truckers and americans over bridges i must have seen hundreds of thousands uh flying

3:40

almost as many canadian flags as americans you may have seen it on the news while the news sort of blockaded it

3:45

no no we never see anything like that on the news in canada because uh yeah our

3:50

media is so subsidized by the government that we anything that runs against government

3:56

dictates and i hate to say that about a country like canada is just minimally or

4:01

minimally covered or not covered at all i had no idea that they can that the american truckers were flying canadian

4:06

flags you'd think that'd be news in canada because isn't it news when canada becomes interesting and in fact i know

4:12

almost nothing about the truckers convoy in the u.s to washington um and i do try

4:18

to follow the news jordan that the the the trekkers uh a convoy in the united states from

4:24

california to washington it was actually pretty massive and i was there every step of the way and so many canadian

4:29

flags you wouldn't believe it hanging off bridges sides of the roads even in blue states uh and uh and it was all

4:36

from inspiration from canada and so uh yeah again courage is courageous cowardice is courageous and uh the

4:43

americans were were very uh proud uh to follow the lead of of canadians and so

4:50

again this is spreading across the world yeah well that's amazing don't even know it do they they don't even know it

4:56

because they don't know that truckers to know it no no they have no idea and and that's really sad you know that we're in a

5:02

situation where we could have that be something that that we don't know and so

5:09

well that's part of what puts us in the situation that we're in okay so you're with the american truckers when they went to washington what sort of effect

5:15

do you think they had it was galvanizing of course you know it's just one one battle of many of

5:21

awareness at that point uh you know that and i i spent so much time with the truckers because you in every country

5:28

that i go to i want to know what the farmers think i go straight to farmers i want to know what people like

5:33

truckers think law enforcement military that sort of thing uh you know the basic pulse of the of the countries that i go

5:40

to and so yeah it had a good effect it certainly as you know this is a long

5:45

road you've been talking about this for years uh and it's you've been fighting this battle for years and you know it's

5:51

a knock down drag out fight and it goes on but you've mentioned i've watched some of your recent programs you you

5:57

acknowledged that we're actually making progress against the west and the other they call them wef here the world

6:03

economic forum the wf uh in netherlands they call it west we are making progress uh you know no no plan ever survives

6:10

first contact with the enemy and now we are the enemy for weap obviously and uh

6:16

and and now that millions of people are waking up it seems like by the week at this point uh you know left is suddenly

6:22

in for an actual real fight and so that's why ik i was just in mexico uh

6:28

tracking migrants as i've been doing this is all part of a larger uh uh a jungle let's say it's not just

6:35

about farmers it's not just about truckers it's not just about the information information war obviously is

6:40

phd level warfare all of the substrate for everything going on is information more as you know so who do you okay so

6:48

you said we are the enemy let's say and so who do you mean by we and

6:53

what do you what do you think the fight's about how would you characterize it and who do you think so to speak is

6:58

on the other side you mentioned the wef and of course they're they're enemies of the moment or what would you call it

7:03

villains of the moment and i think deservedly so in many ways so but how do you characterize this

7:10

battle why do you think it of it as a battle and uh what does it look like from your perspective when you're

7:16

talking to the truckers and the farmers and the and the law enforcement types well actually it's it's

7:21

intergenerational as you know we could go back to the 1920s and talk about russian information war and even earlier

7:28

1879 grant was talking about it when he was in paris and so uh but so so this

7:33

isn't something that started last week or even last generation uh but some of our our biggest opponents at this point

7:40

are certainly west and and ccp of course i've written three books on ccp information war unfortunately they're

7:47

still in chinese language that's the chinese communist party for those of you who aren't up on the acronyms and uh you

7:53

it we'd be hard-pressed to find a more devious enemy than the chinese communist party uh if you're a supporter of the

7:59

ccp and it's machinations then you're either woefully ignorant to a degree that's almost incomprehensible or

8:05

malevolent to the core or some appalling combination of both so and it's so strange to hear you talk about the ccp

8:13

and the wef in the same breath because you wouldn't think at all that those would be natural allies given that the

8:18

wef hypothetically is well on the side of the planet and the west and civilization and the ccp are nothing but

8:25

tyrannical warmongering north korean wannabes so they're not jordan i mean that's an

8:32

important point they're not necessarily on the same side uh but they're part of the same jungle i mean these are two

8:38

serious uh opponents uh you know there's nobody that actually runs the jungle per se right uh yeah

8:44

and and one of the massive opponents obviously is is chinese communist party and they are excellent they are masters

8:50

at information war again i've written three books on this that are only in japanese language i wrote them in english but i was asked to publish books

8:58

by a japanese publisher in japan about this and so in which i did and in an

9:03

attempt to wake up japanese to the intense information war that they are undergoing

9:09

you know i got kicked out of hong kong in 2020 uh by the

9:14

obviously the chinese communist party because i was covering the fighting there for seven months and getting my

9:19

share of rubber bullets and tear gas constantly those things do sting but they're not quite like bullets uh the uh

9:26

the bottom line is is the chinese communist party their information ground game is so intense for instance i went

9:32

to nanjing to look at the the the the rape of nanjing museum this

9:38

museum is i i've studied museum warfare in numerous countries for instance indonesia malaysia long list and i'll

9:45

often go to museums to look for uh hints of uh of behind-the-scenes influence and

9:51

you see in the in the the rape of nanjing museum in nanjing china that thing must have cost 50

9:58

million dollars i don't know how much it cost but but to be directionally accurate let's just assign a number 50

10:03

million dollars and uh you know when when you show up there in the morning there's dozens of buses filled

10:09

with school children and they they go in their different color shirts for the different buses and the different flags

10:15

you know so that and i was the only uh a foreigner there to my knowledge and you know when you're about halfway through

10:21

the museum you're like wow that was the biggest museum that's like the louvre almost you know well it's not quite that big but but it has quite a large museum

10:28

and uh but then you're only you realize you're only halfway through it now as a as a mental health expert you know that

10:34

there's two components to hatred and those are anger and disgust that's like h<sub>2</sub>o if you can if you can combine anger

10:42

and disgust you will get hatred every single time as you go through that i'm a writer so i study these things as well

10:49

as you go through the nanjing museum it's all about hatred and disgust focused towards japanese right and it's

10:56

clear you know if you want to know what a country's future plans are you watch their information ground game and the

11:03

information ground game against japan is a pure hatred uh you know for instance

11:09

they ring the sirens several times a year in nanjing you know as if there's an air raid going on uh when you're you know

11:16

i've spent quite a bit of time in china all over the place uh you know at night time if you're in the hotel room you'll

11:21

always see the movies here comes the drunken japanese soldier again with his uniform and he

11:27

kills the you know the the chinese parents and rapes the girl and he staggers out drunk you know there's that

11:33

movie and then not next comes the second movie that night same thing it's the same story every single night seven days

11:40

i don't i don't suppose they show drunken cultural revolution students from the 1960s

11:46

like killing people and and and destroying the into all the last vestiges of chinese traditional culture

11:53

no sir uh and you can see for instance in okinawa now one of one of the things that i mean

11:59

you've talked about these things before uh you know i have an office entirely and they're trying to split thailand

12:05

into three different parts one of the i was i was out with the malice in nepal for about a year one of the things that

12:10

they did to help you know the malice to eventually win if you want to call it winning is to get everybody to speak

12:15

their own languages right everybody to go with their own divide and conquer when i was recently in morocco same thing you see a new

12:22

berber language written on the road signs which is like a new made up language i mean berber's not

12:28

not a made-up language but the written component is and i see these things all over the place we're you know dividing

12:34

it's been happening down in columbia i was down in colombia last year with a senator maria cabal and maria said why

12:40

are they trying to get all the indigenous people to speak their own languages and to fight each other and to

12:45

fight us and of course you know colombia just fell as well right so this is the same thing that they're doing in panama

12:51

i've spent a lot of time in panama recently uh and and and i'm watching that closely you see panama is melting

12:57

down right now and uh and you know obviously there's a panama canal there that's of some significance to put it

13:04

mildly also panama is a major invasion route to the united states i've spent

13:09

many months that i took two congressmen there last year into the dairy and gap one of the most dangerous jungles in the

13:14

world actually i can't believe they went out there but they they went deep into the dairy and gap and i showed him

13:19

exactly this invasion that's coming through asia and africa and south america up

13:25

through colombia up through panama and going straight to the united states right uh people from about 140 countries

13:32

completely unvetted uh and it is growing it's becoming massive i was there when mayorcus landed right in front of me as

13:39

blackhawk helicopters some months ago expanding our program there for this

13:44

invasion route so all of these things fit together jordan as you know the impact how do you how do you stop from

13:50

becoming paranoid and i mean you're behind the scenes looking at all these strange things this web of intrigue on

13:56

multiple fronts um how do you protect yourself against paranoia and conspiratorial thinking and this is a

14:04

very dead serious question because it's you know it's very hard not to take on the trappings of your surroundings and

14:09

when you're constantly looking at intrigue and malevolence behind the scenes i can't see how that could help

14:16

but color your entire world view and so given that why do you think people should trust your perspective and

14:22

believe and believe that what you're seeing is veritable and and not like tilted by your own what would you

14:29

call it preoccupations and situational peculiarities

14:34

uh well that's an excellent question and i've asked myself that many times because self-auditing is essential in this line

14:41

of work and i do think i've had a sort of self vaccination when i was younger on this particular

14:47

topic because i since i was a child i was always into science

14:53

especially physics and uh i was just um basically i was failing

14:59

school because all i wanted to do was study physics and so and uh you you can never waste a moment of your

15:05

time studying mathematics and that sort of thing right and so uh uh you know when you when you start off when you're

15:11

9 or 10 years old basically enthralled by the sciences and you live in a fact

15:16

you built a fact-based world around your your life you you you build

15:22

self-auditing into your thinking processes right you're always questioning whether am i is this just a

15:28

perception am i right or wrong on this sort of thing uh you know so yeah i mean obviously i'm always uh

15:34

so part of it's so part of its scientific rationality do you have people around you friends and family

15:40

that also help keep you in check well i've never really been highly conspiratorial to begin with i mean for

15:47

instance when i on the museum warfare uh you know i i mean

15:52

that was brought up to me by someone actually a military officer that a former now that i work with closely uh and uh and

16:00

he he flew over to thailand to brief me on it maybe eight years ago or something and uh we it briefed me on it quite a

16:06

while and then we started flying around to different countries like indonesia and malaysia and looking at these museums and i said wow this is clearly

16:14

cookie cutter museums it's clearly designed to cause hatred against japanese and you know when we look at oh

16:21

good lord i could go on for literally i've written three books about it so i'll have to self edit there but so i

16:27

make it go on forever but there is clearly a larger organization around

16:32

these music this museum warfare and it's definitely centered in china for instance when i was at penang there was

16:39

a uh there was a the curator of the museum i said wow what a nice museum you've got here of

16:44

course it was all about hating japanese and uh and uh and and he said oh i just got back from uh i just got back from

16:51

beijing he said i was invited there because they they enjoyed my museum so much and i said oh really do you have

16:58

any photos and he pulls out this book from under the desk actually it's a large book i photographed the whole book

17:03

and it's got photos of all the curators from all these different museums such as holocaust museum in houston texas right

17:10

and it's got all the names in there i photographed everything checked out every name in the book right it's clear

17:16

and it took a lot of research but we can clearly see this is part of

17:21

a very sophisticated organism information operation that is that's

17:28

just part of it okay well let's let's turn let's turn to the wef and let's turn to

17:34

the global utopias and to what happened in canada the canadian truckers here they were pushing back

17:40

against what they regarded as unwarranted government overreach and intrusion into their private lives  
on

17:46

the coving front fundamentally and i was a supporter of the truckers right from day one i believe like  
you do that

17:54

truckers and farmers and the men particularly the men and the women who work on those front line  
occupations

18:01

have a pragmatic wisdom that the intellectual types often don't and i've also noted

18:06

too that the intellectual socialist types really like the working class in principle but they actually don't  
like

18:12

the working class as such because they tend not to hold the same utopian intellectual views that the  
globalists

18:19

do and so we saw that in spades in canada and i've seen my government take a turn for the worse on  
multiple

18:25

dimensions in canada that's jaw-dropping in its continuity and depth and it's clearly the case that  
canadians haven't

18:32

woken up to that yet although perhaps they're starting to and a huge part of that is this appalling and

18:38

unconscionable media con collusion and so now we see something similar happening

18:45

in europe particularly in the netherlands and we should let everyone know and you have to listen to this  
this

18:50

is so important you know the netherlands is the world's second biggest exporter of agricultural products  
this little

18:57

tiny postage stamp of a country that was scraped out of the ocean has managed to

19:02

put itself together so that it can not only feed itself but so that it's a major agricultural supplier  
worldwide

19:08

it's a phenomenal accomplishment we should be so happy with the dutch farmers that we can hardly  
stand

19:13

ourselves and instead the courts in particular have mandated that the farmers be

19:20

scuttled and the government their own government has basically come out right out and said well  
because you guys pollute so much um we have to crack down

19:28

on you as well as reducing the speed limits of our cars which is an ultra appalling move and we we're  
we're sorry

19:35

but a lot of you are going to have to go out of business but you know that's to make an omelette a few  
eggs have to

19:41

be broken and as the president of greenpeace in the netherlands said recently well we know we're not  
going to

19:47

combat climate change the climate change emergency without inconveniencing a few people and now

19:53

there's what 40 000 truckers in the netherlands who are up in arms and i believe a hundred thousand people have

19:59

protested in spain and this is spreading into germany and into the fishermen in the netherlands as well who are also

20:05

being pressured by these utopian types and so how do you tie that into what happened

20:10

in canada and the u.s and and what do you think's going on well it's all part of it this larger

20:18

world economic forum attacks on us of course and and by the way i lived in europe for six years especially

20:26

i lived four years in germany i lived two years in poland uh and i've been all over

20:31

europe right uh but mostly not recently uh mostly i've been in asia recently in other places and so uh but yeah it's

20:38

clear that for instance uh when i was recently in mexico uh following the the migrants uh just streaming across

20:46

in may alone we had about 310 000 illegally crossed into the united states in one month and so

20:53

310 000. roughly 310 000 known

20:58

across just in may right and so uh and i'm not sure what that number is

21:04

this last month i've tried i don't know the number yet but uh but the bottom line is it's it's increasing at a at a

21:11

very high rate and this human osmotic pressure i call it hop human osmotic pressure the push and pull of migration

21:18

is greatly fueled by one information campaigns which i've seen in colombia for instance on cnn encouraging people

21:25

to go north uh and uh and also obviously another thing that causes hop

21:32

is war famine uh pandemic uh and also the economic negative pressure which would

21:38

draw you into another place right so there's a positive pressure that pushes you out and the negative pressure that pushes you in pulls you in and this is

21:45

really uh dramatically expanding you can see this all also in europe as you know big uh

21:51

they're being overwhelmed with hungry mouths actually as we go into a global famine which i've been warning

21:58

about okay so okay so let's talk about okay let's talk about this global famine man because i i see that coming in

22:04

in the fall in a big way and so my sense is well partly because of the ukraine conflict and the fact that we're wiping

22:11

out a big chunk of the world's wheat supply and fertilizer supply that we're going to be putting about 150 million

22:17

people under intense food pressure really starting this fall i think that's when it's going to kick

22:22

in and my sense is well there's no way that can happen without mass migration pressure on europe maybe of a scale that

22:28

makes the last migration crisis look like virtually nothing and so am i being paranoid about that you seem to be

22:33

thinking along the same lines and you said you've seen this coming for about three years i think you're understating it actually

22:40

so what's going to happen in the fall i i started warning in january of 2020 actually and i've warned every day since

22:48

and it's and at this point i worn about you know half a dozen times a day uh so

22:54

pandora let's talk about pan for war first pandemic famine war the triangle of death they always go together if you

23:00

get a big war or a big uh pandemic or a big famine

23:05

you'll get the other two you get one you get the other two it's three musketeers and all of these things any one of them

23:11

creates the human osmotic pressure right so these things go together so when i saw this i was one of the very first

23:18

alerting on the pandemic right i was in january in mid to uh some somewhere

23:23

around january 19th i think i started warning about uh uh of uh pandemic and

23:30

uh in in and so immediately having studied war for so many years not

23:35

just kinetic war and the shootouts and all that i did that for years back when i was quite skinny and running around

23:41

out in the wars and all that uh but there's also information war which the phd level of warfare and then there's

23:48

these other components that people must study if they're going to be a serious student of war which is migration

23:54

pandemic and famine they always go together period right okay so let me ask you let

24:00

me ask you a question about that so my sense was that on the pandemic front that because we disrupted the supply

24:06

chains and we we have by no means fixed that in the lease there's a shortage you can't get a car in canada you can't get

24:13

a motorbike you can't get a uh personal watercraft you can't get paper and cardboard for books there's a there's a

24:19

massive backlog and lineup for everything i know that one container ship in five is now

24:25

snared at a port and so i know what happens when you put pressure on the supply chain the people

24:32

who suffer for that the most are the people at the bottom of the economic hierarchy and so those are going to be people that are barely hanging on in

24:38

developing countries especially in north africa that'll be my guess where this is

24:43

going to affect this is going to have the biggest effects and so you know if you show a one percent increase in unemployment you get

24:50

a five percent increase in psychiatric hospitalization and that's because there's a lot of people who are just

24:56

barely making ends meet and then if you double the cost of necessities like energy or let's say fertilizer or we

25:02

could even put in food then you're going to produce a tremendous amount of economic pressure

25:08

on these people tilt them into starvation and so we've seen what's happened in sri lanka which is just an absolute bloody major

25:16

significant ongoing catastrophe 21 million people in sri lanka there's no way we're going to be able to feed them

25:22

in any real sense for any long period of time so all that eco movement forward on the sri

25:28

lankan front is going to ensure that those poor starving people are going to eat every goddamn animal on that in that

25:33

entire country to stave off starvation and then they're going to burn everything for fuel because what the hell else are they going to do so this

25:40

idea that we can make people poor hungry cold or hot by scaling back food

25:45

production and disrupting energy supplies and that's somehow going to save the planet is as backwards of conception as any dimwit could possibly

25:51

formulate and so okay so what do you think is going to happen in the fall

25:57

massive famines and you know i went to sri lanka four five six years ago to have a

26:02

look-see i'm often just going and looking and checking the police and the food supply and there was plenty of food

26:08

sri lanka had so much food yeah it was just like in cheap and plentiful right and then the next thing you know uh here

26:14

we go now that was doing well yeah one thing about famine famine

26:19

creates famine in the same way that war creates war and fire creates fire famine

26:25

creates famine so when we go into these initial phases of famine you'll see immediately obviously price controls

26:32

will start to be enforced this happens every time it's happening right now in panama in the last 48 hours right price controls

26:39

on gasoline and some other things oh yeah a lot of violence now in panama in fact just minutes before you and i came

26:45

on i was talking with a friend in panama about the current situation that's how close i keep tabs on panama

26:52

for various reasons one is the panama canal and so um and so and another

26:57

another thing is is for instance uh when when people are hungry

27:03

as you know within 48 hours they're going to hit the streets right and they'll start robbing the stores they'll

27:08

start robbing the the trucks and the trains and the boats and so then supplies stop going governments always

27:15

start taking food from the farmers they without exception in my uh uh study over

27:21

the years the governments always go for the farmers and like in egypt recently forcing the egyptian farmers to sell to

27:27

only approved uh you know uh warehouses that sort of thing so people start

27:33

robbing from the farmers as well right and then the farmers say hey i'm not making i'm i'm either bankrupt or i'm

27:39

not making any money and so the farmers stop farming so that's how you see we get into the second season of this right

27:46

and so the famine creates more famine just like fire creates fire and then

27:51

famine uh you know let's say you have uh 20 million people that are hungry in sri

27:56

lanka and as their nutritional uh you know resources diminish so too does

28:02

their physical resilience and now they're open to disease many of the people that die

28:08

in famines actually die from things like they call them famine fevers one of those is typhus another is relapsing

28:14

fevers uh cholera which is not a famine fever waterborne of course fecal

28:19

anyway the bottom line is many of the people if not most who die during famines are actually from disease

28:26

and then this causes that human osmotic pressure and these sorts of things often lead to more war right so it's a it's a

28:33

recursive sort of you know the the factors just keep uh you know it's it's almost uh a

28:39

fission reaction right and yeah sure positive feedback loop yeah yeah yeah

28:44

yeah run away pareto distribution problem runaway runaway catastrophe yeah

28:50

i get it positive feedback loops emerging everywhere and why do you think what are the factors that are driving

28:55

the re-emergence of the famine um you said there's a lot of instability in central america and so we're going to

29:02

keep an eye out there obviously sri lanka has collapsed entirely and there's absolutely no doubt whatsoever that a

29:08

major part of the reason that sri lanka collapsed is because the globalist utopians get gathered the reins of

29:14

government in sri lanka because it was actually developing at quite a rate and as you said it would have a lot of food and not a bad general income level just

29:20

a few years ago so this wasn't a catastrophic country to begin with it was a country on the move upward and it

29:26

was completely scuttled by these globalist plans and so what's contributing to the developing famine

29:31

right now in and where do you think it's going to be most intense where will it be the most intense that's

29:38

the something i think about every single day uh one of the things i've learned in wars and then the study of war is uh

29:45

whatever you think will probably turn out to be wrong yeah yeah yeah you know this i watch so many of your programs uh

29:52

the the this you know the the the uh uh this the systems that

29:58

that emerge will will present themselves in due course right uh what we can see

30:03

is the the my you know when i talk with laura logan the famous correspondent she'll say

30:09

they've been talking about you know a 1.2 bill they meaning world economic forum have been talking about uh 1.2

30:17

billion people uh forced to migrate they've been talking about that for years and it's true yeah

30:23

and they're going to blame it they're bloody well going to blame it on climate change you watch that's what they're going to do

30:29

you bet yeah so 1.2 billion 1.2 billion so my estimated estimation of 150 million is

30:36

you think is optimistic i think highly optimistic i i would not be surprised

30:42

jordan i would not be surprised if within by 2025 if a billion people aren't dead i mean we're really heading

30:49

into the most epic famines that have ever happened in human history

30:55

man i i was i was looking at a i was looking at a economist cover the other day the economist magazine and it said

31:02

20 million people saved by covid vaccine and i thought yeah you bastards for

31:07

every mil for every million persons that you saved with the lockdowns and the whole vaccination sk uh uh not the

31:15

vaccination scam but the but the pandemic panic you're probably going to kill 50 because

31:21

of supply dis supply chain disruptions and postpone starvation and so you know

31:28

that's part of the problem with turning political decisions over to the medical experts is that what we save we save

31:33

some people with the left hand and we doom a hundred more with the right hand and and and that and there there is a

31:39

lag which we basically tried to shut down the world's economy for two years as if we could do that because well look

31:44

everything's so plentiful isn't it doesn't it matter at all that people aren't going to go to work it turns out

31:50

that it actually matters a lot and so what are the factors right now that are contributing to this emergent

31:58

food insecurity quote problem why are why are these people who were

32:04

being fed not being fed now let's talk about energy energy is another kill shot yeah right yeah

32:11

this highly ill-advised war in uh ukraine uh you know i was in lithuania

32:16

last year warning about this over and over and over i was down in morocco uh with my friend war correspondent

32:23

chuck holton and we called up frontex which is like the european border patrol you might say their their headquarters

32:29

in warsaw and they said belarus lukashenko the dictator there is pushing migrants into lithuania and i had been

32:36

with the lithuanian army in afghanistan i called him up i said what's going on and they said hey come on up so i flew

32:43

from morocco to vilnius lithuania and i had full access to their elected

32:48

officials intelligence uh the camps for the migrants and army the whole thing so for almost a

32:55

month right so i was very well aware that russia is up to something uh and i

33:01

was publishing that right and so we've gone into this war on ukraine right and

33:06

uh russia is just of course obviously a nordstream is cut right will it be

33:11

turned back on and now as you probably are aware we just had i wouldn't turn it on if i was putin

33:18

i wouldn't either and you know even trump warned them about this years ago love him or hate him he was very clear

33:24

about it and we just had an explosion roughly a month ago at a texas port an

33:30

ing facility which is critical right we were supplying uh liquid

33:35

natural gas to europe this would have helped you need this for the bosch the hebrew bosch process to create the many

33:43

of the fertilizers right that natural gas is very important then we had an explosion and a a pipeline explosion

33:50

roughly two weeks ago in texas and then we just had another uh uh natural gas uh

33:56

uh problem at a plant in oakland we've had three oklahoma two in texas right

34:01

meanwhile they're being shut off in from russia and we've got a potential

34:06

war brewing here for instance between iran and israel imagine where that could go

34:12

on energy supplies we're looking okay so let's let's look at let's look at that for a minute so i'm going to lay down a

34:17

proposition here for all of you who are listening if you are a friend

34:23

to the poor and the oppressed and the hungry the number one thing you want to do is

34:29

drive energy prices as low as they possibly can be on every front that you

34:35

possibly can manage and that bloody well includes coal and petroleum and natural

34:40

gas and then we could add nuclear to that and if you want to throw renewables in for the tiny percentage that they

34:46

account for you could do that too but because energy is equivalent to work and because work is equivalent to food and

34:53

shelter if you make energy expensive what you do is you starve the poor and you don't have to starve them very much

34:59

before they become desperate and things fall apart and then we fall into these positive feedback loops that michael has

35:04

been describing and so when you hear these bloody globalist globalist utopians talk about the necessity for

35:10

higher energy costs you remember that that comes directly at the cost of the world's poor christian freeland the

35:17

deputy prime minister of canada two weeks ago had the unmitigated and i would say quasi-demonic gall to announce

35:24

publicly that eight dollar a gallon gasoline in canada was actually probably a good thing because canadians should be

35:30

reminded non-stop just how severe the climate crisis is every time they fill up their cars and that's perfectly

35:36

bloody fine unless you're living on the edge of your economic capability and the fact that you can't afford to fill up

35:42

your car anymore puts you into unemployment and food deprivation in relationship to your children and that's

35:48

in the rich west and now in europe we're so goddamn stupid on our energy policy because of these idiot environmental

35:54

schemes that we've made ourselves pathologically reliant on the russians and we're going to bloody well see what

36:00

that costs us and i know the germans are burning coal again because their their switch massively expensive and

36:06

counterproductive switch to so-called renewals has been another catastrophe and so now god only knows how expensive

36:13

energy is going to be become and that's directly related to the provision of the famines that michael is talking about

36:19

so get ready for this folks because it's coming down the pipes jordan

36:24

germans are collecting wood right now uh as much as they can get they realize this can be a very cold winter right

36:30

yeah this is going to be a very well that's what i thought the globalist utopian mantra let the poor freeze in

36:36

the dark that's how you save the planet yeah no kidding man

36:41

if anything that can destroy the the european union that'll be it if germany collapses it's over right and you know

36:48

many of us have been looking at greece and italy and portugal and spain for years wondering which one would go first

36:55

i thought it would probably be greece but we saw italy looks like they might be the first to fall off the tree right

37:00

and uh and and probably the other three italy uh portugal spain uh you know

37:06

greece or italy already uh you know greece uh probably be soon to follow these are the weak uh canaries in this

37:12

coal mine i mean it'll fall out of the european union oh yeah and now look

37:17

uh putin has just uh cut the gas uh for the annual maintenance and uh and of

37:22

course we've got zielinski over there uh saying that you know canada should not send back the turbine to germany and

37:29

like he's inserting himself basically into the life and death of hundreds of millions of people zielinski the actor

37:35

uh you know i mean this is really we've never seen something like that i mean i if things continue it's all about

37:42

conditions people often talk about sparks you know what will be the sparks yeah yeah no kidding man sparks sparks

37:48

is an amateur question professionals talk about conditions there's always sparks and the conditions

37:55

that are being set now with whether it be the inputs of fertilizer fungicides pesticides all the other

38:02

chemicals that go into agriculture the energy diesel lng uh just so many factors that uh that

38:10

are really going the wrong direction transport you know famines in the past have generally been recently i found the

38:17

1910 1911 britannica uh and i looked up famine i was just seeing what they you

38:22

know thought about famine back then and it was a very wisely written uh uh entry in britannica and they said they they in

38:30

the entry uh posited that that you know large famines are probably a thing of the past because now we have modern

38:37

transportation obviously some of the largest famines were yet to come because the largest famines are always caused

38:43

not by locuses and drought they're caused by people taking advantage of these things right like the like the the

38:49

holata more in in 1932 33 in ukraine very good book on that called red famine

38:56

where six million people were starved to death by the communists and where where women were shot if they went out into

39:03

the fields that had already been harvested to glean individual kernels of grain by hand

39:09

to feed their children if they didn't turn over those individual kernels of grain than they were then they were

39:14

summarily executed and that was fun in the communist soviet union only six million ukrainians and so and you're

39:22

exactly right on the famine front as we like to think that the reason that people starve is because we don't have enough food and at the moment the reason

39:28

that people starve is because we're stupid and often malevolent and so okay so germany's in trouble and a huge part

39:35

of this as far as i'm concerned is because of these unbelievably ill-advised energy policies that were hypothetically put in place to aid

39:43

aid the planet's movement towards lower climate uh transformation and

39:49

fair enough you know maybe we have some concern on that front but this this absurd panicking combined with post hoc

39:55

central planning and this insane notion that we can insi we can somehow make energy more expensive without producing

40:02

uh cascading sequences of catastrophes is naive beyond belief and malevolent at least in part so now germany's in

40:09

trouble because they're hyper reliant on the russians and so now back to the dutch farmers now the the

40:17

the dutch government put pressure on the farmers recently because a legislation a legislative body that was eu controlled

40:25

that's my understanding decided in favor of an idiot environmental group that that that

40:30

and the court compelled the government that's a non-legislative body by the way the court compelled the government to

40:36

act in relation to the farmers and apparently the farmers have had enough of this and so what's happening in

40:42

holland and and elsewhere in europe on the revolutionary front let's say and

40:47

and and what do you think their motives are and what effect has this had in holland wow this is a big topic as you know yes

40:55

farmers are probably the finest and most efficient in the world right and uh practically no

41:01

dutch people seem to know that which is extraordinary right and uh and and they don't realize how

41:07

important their farmers are to the world with as the second largest food exporter in the world yeah it's well it's a

41:13

miracle right because the hell of how big is holland it's like it's a tiny country you can drive across it in like

41:19

three hours meanwhile mark ruta the prime minister is the teacher's pet of klaus schwab i mean he's even more

41:26

favorited than trudeau right which is pretty hard to do and so that's right that's a hard contest to win on on the

41:32

appalling front yeah and so you know the the the bureaucrats in brussels they are

41:37

ruling by decree right and of course it has nothing to do with nitrogen here they're talking about nitrogen it has

41:44

nothing to do with nitrogen it has nothing to do with ammonium it has to do with numerous things one is taking the land

41:50

just as uh happened with stalin in ukraine you know labeling the farmers coolocks in ukraine

41:57

you know the ukrainian farmers and attacking and killing them here in netherlands there's a

42:03

information campaign to make the farmers look like bad guys here as well i mean these are the new catwalks right

42:09

meanwhile let me tell you something about farmers i have spent more than half of my life overseas more than 80

42:14

countries a lot of war i'm always going out with farmers right and i've never met farmers from any country i can't get

42:22

along with i mean like even taliban farmers had common

42:27

sense at one point i'm in afghanistan out with uh one guy he's growing opium he's grown poppy for opium and uh he

42:34

said you know he's showing me the bugs on his plant he said your helicopters dropped these bugs on our plants at

42:40

night to kill our plants i said well no sir we should be doing that because you're creating opium but but we don't

42:47

we're not that smart and he goes yes you're not that smart and then he's like let's go have teeth and but anyway

42:53

even at one point i'm out with the because us the two years i spent in afghanistan one year was with various

42:59

militaries like british and american militaries and and uh lithuanians and that sort of

43:05

thing and another year was just alone running around out with farmers and whatnot and at one point yeah well the farmers farmers are so much they're like

43:12

truckers in that regard there's so much in contact with the they have yeah they're like yeah yeah electricians and contractors

43:19

and carpenters that's why christ was a carpenter by the way because if you're not honest you can't build a house that stands up man and he wasn't a phd

43:26

sociologist he was a carpenter and those people who have to have their hands in the dirt and their feet on the ground

43:32

they have a sense about how the world works that's practical and embodied that the the pinheaded academic globalists

43:38

lack entirely and are also often incredibly jealous of and so in canada it was the farmers and the truckers who

43:44

rose up you know the misogynists and the bigots and the racists in our prime minister's terms and then that's

43:49

triggered these these co-occurring protests in in the us and in holland and

43:55

now it isn't easy to get farmers upset either way because those tractors that they bring to the protests those things

44:01

are bloody expensive and most of the farmers don't own them they're they have to finance them and so they're running on very thin margins three to five

44:08

percent a year generally and you have to be one canny person to run a big farm in a modern economy you have to be paying

44:15

attention to all sorts of unbelievably complicated and sophisticated things and so when the farmers have been pushed to

44:20

the point where they're willing to take time away from their farms to spray manure on the government steps it's probably time to listen so i agree with

44:27

you on that front 100 percent so okay so you're in holland and you're talking to the farmers and what are they telling

44:33

you well you basically are reading my mind which is very difficult to do when so when i was just in mexico uh and

44:41

i saw the dutch farmers i i know a lot of people in netherlands and so when i was getting inside you know that they

44:47

were acting up i was like dutch farmers are actually protests no yeah right right right man the last people you'd

44:53

ever expect yeah so that's why i jumped on the airplane uh because you know if the

44:58

dutch farmers are acting up i need to come over here and hear what they had to say that's for sure so let's talk about

45:04

that it's it's it first of all clearly the the west the wef they call it weft

45:10

here in netherlands the world economic forum is trying to control food supply right that is production and

45:15

distribution right and so uh and one of the ways to do this is as stalin did

45:20

with and mao did in china and stalin did in ukraine and russia is to take the farms away from the traditional

45:27

farmers and then put your new your farmers on that land right to what end michael like i read

45:34

about you know the the notion that we need that we need to you know turn to plant-based foods and

45:39

insect-based protein in the future and that you know meat production and all the cow methane or contributing to the

45:46

degradation of the environment but like what do you do you see this as a plan or just

45:52

as a as a part of the globalist utopian ideologically blind stupidity

45:58

because i mean they're farmers do pollute there is runoff from from fertilizer it does cause algal blooms

46:04

for example in the water and these are these are problems i don't think they're insurmountable problems but you're

46:10

pointing to something that's more malevolent and deeper and programmatic and and you know we don't want to go there

46:16

without without questioning that presumption i always think if you can explain it

46:22

with stupidity you don't have to explain it with malevolence well as you know that's a be careful

46:27

with that one because sometimes we do have to go to malevolent incidents i know i know we do yeah and and i watch

46:33

your show enough to know you know exactly why this is happening and let's talk about this if the dutch farmers

46:38

let's take this as a premise are the most efficient in the world well let's just say they're the second most efficient why would you knock them out

46:45

of the saddle to get somebody else to produce the food where indian farmers i mean who's going to produce this food in

46:51

a much less efficient way that would create even more pollution this is clearly about control also there's

46:57

something that you never hear in what in uh in in any press that and that i've heard in the united states

47:04

is the tri-state city tri-state city is this smart city that they're proposing

47:09

to build between the tri-states or belgium netherlands and germany so this mega city basically uh that would take

47:16

up all this farmland in that area and which would uh bring uh huge amounts of more people into this area right so the

47:23

tri-state city is something you don't hear much about but that's another part of this plan there was a fire about

47:29

maybe 10 days ago i went to it right after the the next morning and it's it's at a picnic distribution center which is

47:37

there was a there was a uh an investment 600 million dollars into this picnic food distribution center

47:43

from the bill and melinda gates foundation coincidentally and it burned down right and so you know that brought

47:50

a little you know raise some eyebrows why did that thing just burn down there's many of them there's others and netherlands

47:56

are growing but the bottom line is is the bill and millen or bill gates is buying up farmland as you know all over

48:03

the place i know he is the biggest private landowner in the united states right now and the land that he's

48:09

buying up he's taking out of food production and it seems to be because he's obsessed

48:14

about about meat production at at least in part doesn't believe that that's part of a sustainable future and so but but i

48:21

i do share your your skepticism it's the same thing happens on the bloody energy front it's

48:26

like well australia won't build coal generating electrical plants but they'll ship their bloody coal to china where

48:31

they're going to build much dirtier plants and the same thing applies to canada if we shut down our industry

48:37

energy industry which our bloody insane narcissistic delusional traitorous prime

48:42

minister thinks happens to think is a good idea and seems to be working as hard as he can to manage all that's

48:48

going to happen is that we're going to see the ground to people like putin who've also turned into a radical enemy

48:54

with his with his hands on the control pump for europe i mean i don't see how we could be stupider here in the west if

49:00

we actually took courses in stupidity and tried as hard as we could it's it we seem to be doing everything

49:06

we can to break everything as rapidly as possible and then i wonder too you know is it has it got to the point where the

49:12

people who think you know that you can't make an omelet without breaking a few eggs and there's too many

49:18

people on the planet think that this is some sort of like needles eye that we have to go

49:24

through all this mass starvation and death so that we end up with a sustainable population i mean jesus christ that's a

49:31

dim and grim scenario but i as you said why would you take the dutch

49:37

farmers out of business when when they're so unbelievably hyper productive and efficient

49:43

it's just it's not like there's too much food especially not if we don't have farmers

49:49

if anything i would be uh trying to get a large agricultural institute here in netherlands to teach other farmers how

49:56

to be as efficient as dutch farmers are i would replicate these farmers in afghanistan actually many of the

50:03

farmers coming over i was out in the farms quite a lot were actually dutch farmers to teach afghans how to do

50:09

things better but the bottom line is as you can see there is a huge i watch you all the time

50:15

you know what's happening there's a huge authoritarian uh uh uh the the desire to have a one world order

50:22

is clearly strong and this isn't the first time it's happened as you know it's a constant in human behavior and

50:28

and also as a as a as somebody who studies the human psyche a lot as you do

50:34

you realize pulling these farmers off of their traditional farms unroots them it cuts their anchor their

50:41

boat anchor they're going to be drifting uh you know culturally so that makes them much easier to you can't control

50:47

farmers as well that's why yeah get rid of the farmers you know stalin had to get rid of those farmers because

50:52

farmers have a mind of their own same with mao you got to get rid of those farmers because they think for

50:58

themselves and likewise here these dutch farmers think for themselves and so they're the bad

51:04

guys to me they're the great guys these are yeah me too man that's our backbone they are our

51:10

backbone that's why i flew to netherlands from mexico i mean that's how important this is

51:15

okay so what have you just what have you discovered on the ground there you've been talking to farmers tell us first of all tell us about how the protests were

51:22

organized what their scope is and what the farmers why the farmers are doing this and what they hope to accomplish

51:28

well the farmers actually the farmers in netherlands are amazingly uh cognizant of what's happening uh many

51:34

people that i talk with around the world don't realize you know these other things like the weft you

51:40

know the wef and these sorts of things but the the dutch farmers are talking about it in detail they're like ah the

51:45

nitrogen is nonsense you know and it's all about class schwab and bill gates is trying to do this and they'll go into

51:51

great detail they know exactly what's happening they're trying to take our land because of this this and that and the other and you know they they know it

51:58

they're not just like in panama it's another story panama is just like give us cheap gas give us cheap cheese you

52:03

know keep you know cheap this and cheap that and we'll go home right they're easily satisfied not the dutch farmers

52:09

they're more sophisticated these are serious players here and again that's why i jumped on an airplane if people

52:14

like this are blocking streets around netherlands and we got the german farmers joining up with them and saw

52:20

they're blocking the border together german and dutch farmers right polish farmers you know i love poland i

52:25

spent two years there polar polish farmers are making videos in support of

52:31

dutch farmers that's how much is look that started in canada jumped over to

52:36

united states it's over here now i mean it's really growing this courage is spreading and

52:42

so and you see italian farmers spanish farmers people are rising up

52:48

and the more they realize what's actually happening because you know the man behind the curtain is that is the

52:54

wef the world economic forum of course we're going to have to deal with china but at this rate if germany falls from

53:00

these energy issues which is looking pretty likely at this point china is going to peel off the rock too right as

53:06

are we economically right so oh for sure yeah we cannot sustain we cannot we

53:11

cannot sustain the collapse of germany that's absolutely 100 obvious that would be an utter bloody catastrophe if

53:18

germany collapses eu's gone right for a while right and uh and and uh i mean the eu will probably

53:24

dissolve that's my guess i don't know we'll see when time unfolds but obviously that'll take our economies with it and china right and japan and of

53:32

course japan imports what 60 70 all these island nations and island state like hawaii that import hawaii 90

53:40

of their food imported right oh yeah yeah they are going to be in for a world of hurt uh japan imports most of its

53:47

food and you know some of these countries that i have to uh you know

53:52

and i kind of uh i should say maybe insulted the french for a while years ago and

53:58

saying why are they defending all these small farmers all the time now i see the french wisdom you know

54:05

these small farmers yeah that resilience and these when you go to france and you

54:10

go to i'm sure you've been to france yeah yeah and and their small farmers everywhere

54:16

provide a great deal of resilience right and that's why in netherlands if they if they lose

54:22

these farmers are vital for that they're as important as their army i mean uh you know without

54:28

these farmers you're somebody else's uh you're in somebody else's pocket bill gates world economic forum yeah well and

54:35

also if you lose if you lose the farmers for one generation you learn you lose all that knowledge you know and i i saw

54:42

the government said well some of these farmers are just going to have to move it's like what are they going to do

54:48

they're going to move their farm how are you going to do that you can't move a farm and it's not like these things are

54:54

just what transferable fungible in this simplistic manner and so yeah this is gen this is it's

55:01

such a form of insanity and it's all justified by the fact that these half-wit globalists are claiming

55:07

constantly to be moral because they're saving the planet and you know i know this literature i know the lit the

55:13

planet-saving literature let's say because i studied it for about four years and in some depth and i think i

55:19

found the world's thinkers who thought this through properly and that would be matt ridley and

55:25

bjorn lomberg and marion toopey most particularly and all three of them and i would put born laurenberg at the top of

55:31

that uh list those thinkers knew something fundamental and something so

55:36

bloody optimistic that i couldn't believe it was true when i first encountered it which was that if we really want to reach a kind of

55:42

sustainable harmony with the planet the best way to do that absolutely obviously is to distribute

55:50

autonomous free market systems as widely as possible and then to get people everywhere in the

55:55

world as rich as we can as fast as we can because the biggest contributor to environmental degradation isn't

56:01

industrial uh it isn't industrial development it isn't the efficiency of the dutch farmers it's

56:08

absolute bloody poverty and privation and the probability that people at the bottom of the economic distribution are

56:14

going to fall into these catastrophic positive feedback loops that you described and devastate and lay waste to

56:20

everything as soon as you make people rich the data on this are crystal clear as soon as you get people up to about

56:26

five thousand dollars a year in gross domestic product they start caring about the environment locally and autonomously

56:33

and so you know we're in a situation right now where if our leaders weren't so concerned with scoring cheap

56:38

reputation points and being hyper moral in their ignorance and and pretentious

56:43

in their global uh ambitions we could be working towards a world where everybody

56:49

had enough food and enough education and were simultaneously inspired on their own account to

56:55

do what engage in the kind of environmental stewardship that would leave a good plan for their children and their grandchildren we could have our

57:02

cake and eat it too you know and yet what we're doing is we're breaking the supply chains and dooming

57:07

the poor and and fostering what's going to be a mass migration into europe and that's just going to be a bloody

57:13

catastrophe and i i hate to see this and and i hope i'm wrong and i'm just being

57:18

paranoid but but i don't think so i don't think you're being paranoid uh

57:24

you know again i spend most of my time downrange uh uh you know i spent a lot of time in places like china india just

57:31

good lord i mean you know when you land in china sometimes i wonder if my airplane is gonna make it through the

57:36

smog or we're gonna get stuck like amber and the smog you know i mean it's so thick sometimes you can't see the ground

57:42

it's unbelievable and and likewise with india right uh i spent almost a year in

57:47

india and another year in nepal right it's just in thailand where i have an office

57:52

sometimes you have to have air filters in every room and because you know because all of asia is

57:58

not all of asia but most of asia is burning their farmland every year you can see it in satellite look it up i

58:04

mean it's unbelievable so i mean this pollution that comes from poverty is quite intense not that china is poor and

58:11

rich and and india obviously is is uh increasingly wealthy but they have huge

58:17

amounts of impoverished people and their factories still actually are behaving as

58:23

if they're poor they're dumping smog out you know unfiltered it's unbelievable uh

58:29

anyway we could go on about that forever but the bottom line is the farmers are clearly under attack here in netherlands

58:37

the german farmers also are very efficient again i lived here sorry four

58:42

years in germany and uh and uh that and and their farmers are also under attack

58:48

and so all all across europe how many people are engaging in these in these protests right now and and are they

58:55

raging as intensely now as they were a week or two weeks ago uh my sense is that they're actually

59:01

growing uh they're they're not uh they're not say going like panama was in santiago last night in panama very

59:08

violent and burning things and stealing police cars they're not doing that here but you can see it's a more intellectual

59:14

uh at this point it's not gotten intensely emotional at this point yet uh

59:19

although i i anticipate when if the energy doesn't get turned back on and

59:24

and and yeah through the nordstrom things are going to get emotional right uh all across europe including here now

59:32

most of the dutch that i talked with i was talking with a member of parliament the other day he was

59:37

completely oblivious to the famines right jesus christ

59:43

totally missing it right and so this this is kind of of concern and most of the dutch people i speak with actually

59:49

don't seem to see that uh which is of cour but there's these stores are nicely stocked and yeah netherlands it's

59:57

a place of honey it's milk and honey here you know yeah so as you know you're a student of history

1:00:03

uh often before the storm everything's quite nice

1:00:08

and the wine is flowing and that's the way it is right now yep and so i've read um western reports

1:00:15

that it's about 40 000 um dutch farmers and so i don't know what percentage of the farmers that is

1:00:22

and i don't know if those numbers are anything approximating accurate and i don't know if you also are aware no

1:00:29

doubt you are of what's happening in spain where i understand there's been about a hundred thousand people protesting and so

1:00:35

um what's the scale of this in holland and it's growing into the the fishermen are also coming out in support of the

1:00:41

truckers as far as i've been able to tell and if you want a job that's even more difficult than being a farmer maybe

1:00:48

being a fisherman would be the more difficult job and so what sort of scale what sort of scale

1:00:54

are these protests uh manifesting at the moment in europe and how many countries do you think are involved you said

1:01:00

poland germany spain the netherlands um scale and and spread

1:01:07

italy as well uh i i'm kind of reticent to make that guess yet and i've actually

1:01:13

published about this many times over the years whether i was in uh the fighting in thailand or the fighting in uh

1:01:19

in hong kong and which i've spent many years in these sorts of things and i'm often you know reticent to

1:01:26

to assign numbers now the media might say 40 000 or whatnot i know it's a lot

1:01:31

let's put it that way and i and i do sense that it's growing uh it's not gripped the nation yet it's not reached

1:01:38

that level at all you see that the dutch flag is often being flown inverted now

1:01:43

instead of red white and blue it's blue white and red and now the the the dutch government about within the

1:01:49

last week or so said that they're going to start you know taking those off of the overpasses because they present some

1:01:54

sort of danger of oh yeah there you go yeah yeah the dangerous people will take a photo and put it on you know their

1:02:00

social media right and then it'll spread uh and one town i think two days ago said that they're that you know they're

1:02:06

not going to do it they're just going to let them fly right so i mean it so the symbols are growing uh i'll meet with

1:02:12

part of the duck well we want to we want to focus on something here too for the enlightenment of the listeners and viewers so i don't

1:02:19

know if there's a more intelligently and compassionately and justly civilized

1:02:25

country in the world than the netherlands so let's think about that country i mean first of all it shouldn't

1:02:31

even exist the dutch had to literally drain the oceans and build

1:02:36

walls just to make the country exist and believe me man you bloody well better be

1:02:41

organized in order to do that and they did that hundreds of years ago and put together this unbelievable

1:02:47

system of irrigation and drainage that ran on those amazing windmills which are technological marvels and and dutch

1:02:54

society is unbelievably civil and peaceful and productive and interesting

1:02:59

and culturally vibrant it's a great country it's a it's a stellar miracle as

1:03:04

ion herze ali uh pointed out when she moved there from from uh somalia

1:03:10

and so so we don't want to underestimate the central significance of holland and then

1:03:17

obviously of the netherlands obviously that country is predicated to some degree for its success on the provision

1:03:23

of stable food supplies and these unbelievably efficient farmers and so the fact that they are up in arms about

1:03:29

all this is of signal symbolic and practical importance which is why i think it's so

1:03:35

necessary to focus on their concerns and also so appalling that this isn't headline news in every every legacy

1:03:42

media outlet across the across the west because when the dutch farmers are upset

1:03:48

and moving on moss the way they are something has gone seriously wrong this is a canary in the coal mine situation

1:03:56

it really is and you know as you mentioned the the sophistication of these of these people in general i mean

1:04:03

basically the netherlands the sophistication of building this country out of nothing i mean it's basically

1:04:09

flat pyramids i call this just think of the pyramids flat i mean this is very difficult country to build and yet they

1:04:16

did it back without modern machines they did it just in their brains and their

1:04:21

brawn and they did it in persistence and organization these are extraordinary

1:04:26

they're they're not normal they're like japanese right they're like yeah but more so right and

1:04:32

yeah right well they're even taller right they're like how i think the dutch are the tallest people in the world and so i always feel like a shrimp when i go

1:04:38

there and and metaphysically as well because it is such a remarkable country they are tall i mean they're bouncing

1:04:45

their head off the moon it seems like and so so i mean but i mean extraordinary uh people and

1:04:51

and and thus came these extraordinary farmers right and so and thus they are an important

1:04:58

target to take out uh for people like west when you're talking about information more

1:05:04

and when you're talking also the food supplies i mean this is just like every every uh

1:05:10

company every uh you know invading army or whatever always has a budget right

1:05:15

there's only so much energy you have and it's the same with weft the wef and so you need to concentrate your efforts to

1:05:21

get things going in places like russia and ukraine and to get things going in panama if they're behind that uh and

1:05:29

also netherlands so you know pick your targets you know you're gonna pick uh vital uh critical nodes and netherlands

1:05:35

is a critical node there's a lot of bang for the buck here by taking these farmers offline uh and there's and

1:05:41

culturally as well uh because you know once netherlands is unmoored remember this this this is

1:05:47

meant to be the hub of tri-state city don't forget tri-state city i mean this is and what

1:05:53

what is that tri-state city what's what's the idea there tri-state city is meant to be a mega

1:06:00

smart city between the tri-states would be uh germany belgium and netherlands where those

1:06:06

borders come together this mega city that many dutch have actually not heard of and uh and and they will take this

1:06:13

farmer's land and make this mega city there and bring people from all over the world

1:06:18

and this is to what end to what to what end to what end what's what's the rationale for that

1:06:24

central plan central pla okay okay so okay so what are the farmers what are the farmers hoping to accomplish like in

1:06:31

canada part of the reason that the truckers convoy ended i would say and i would say it

1:06:37

ended pretty successfully in many many ways first of all they had the sense to end it before it degenerated into

1:06:43

anything even vaguely approximating violence which was extremely wise and conservative on their part and careful

1:06:50

and compassionate the opposite of all the things they were being accused of and but part of the

1:06:56

problem with the truckers protest it wasn't exactly obvious what the end goal was you know and so they were accused of

1:07:02

fomenting rebellion and wanting to produce a january sixth insurrection which was basically what the bloody

1:07:08

trudeau liberals accused them of and tried to convince canadians of and which the americans even democrats think is an

1:07:14

utterly preposterous notion and which was factually untrue to the nth degree so but they didn't exactly know what

1:07:20

they wanted they wanted the damn government to leave them alone fundamentally and stop mucking about with the energy economy and stop

1:07:28

intervening in their life that made having a livelihood impossible but it wasn't more concrete

1:07:34

than that you know end of vaccine mandates that was part of it the mass mandates but and so

1:07:39

but what is it that the dutch truckers want apart from not being like eviscerated and chased off their land

1:07:47

well you know that i i would say that the canadian truckers protest didn't end

1:07:53

it took on a life of its own it spread i mean it's fantastic yeah fair enough man spread in america and here now right and

1:07:59

so yeah yeah and what do the dutch farmers want mostly they want to be left alone they want to be farmers uh you

1:08:05

know they right i was out of this they want to go back to work they're farmers i mean they're busy yeah

1:08:10

i mean they're business people they're they're they're all those things at once they just want to be left alone they want to be farmers they have their own

1:08:17

culture and uh and they just want to do what farmers do which is farm right and make money and graze their families and

1:08:23

and and and live life right and feed other people which is really nice of them all things considered right and i

1:08:31

think everybody watching this probably has somebody in their family who's a farmer right i mean uh you know it's

1:08:36

just i mean pretty much all of us are in some way tied to farmers if not directly uh very close indirectly

1:08:44

and and the farmers again we can't understate this the farmers are a backbone of this

1:08:50

culture and when it comes to information wars whether that be mao unmooring chinese or

1:08:55

the russians doing this you know creating the soviet union you want to cut people from their boat anchors cut

1:09:02

them from their cultural anchors and then you can uh then they're very easy targets for many things for instance uh

1:09:08

for instance uh genocide for one uh and and another is uh menticide right rape

1:09:15

of the mind uh which is a great book which was written in netherlands right rape of the mind 1956 one of the best

1:09:21

books on uh brainwashing i've ever read uh written right here you know because this has happened many

1:09:28

times in the past it's gonna continue to happen in the future and one of the most

1:09:33

important vaccines that we can take is to study cult making and mint sides and how these

1:09:40

techniques are used against people i've studied these things for years because when i was in special forces people

1:09:47

talked about if you want to fight communism you have to study cults because communism is a cult right it's

1:09:54

it's got cult-like components that are very impor you know i so i studied cults for years i infiltrated a cult at one

1:10:01

point actually it was a cannibal that i tracked down oddly enough and infiltrated them that's an interesting

1:10:06

topic oh my god yes it was epic but i mean but the point is is cults are cults and the only cults

1:10:13

people won't see is the cult that they're in right people will never see and that would include me if i'm in a

1:10:19

cult i'm probably not going to see it right but everybody else can see it hey that guy is in a cult right and so you know

1:10:25

the the cult making of wes the wef we can see clearly they've got this climate

1:10:31

cult right yeah everybody's like oh we've got to do this and you know we're willing to kill people that in mass to

1:10:37

do it even though we have no idea about this well okay so so let's talk well let's talk

1:10:42

about that again you know the reason i like bjorn lomberg because there are some concerns on the

1:10:48

environmental front like there always are we've overfished the oceans to a terrible degree and it would be better

1:10:53

if we polluted as the least possible and there is some evidence that human contributions to global warming are a

1:11:00

genuine thing but i looked at the data as broadly as i possibly could on that front and i concluded that lomborg's

1:11:07

group in copenhagen had the most intelligent approach to assessing the problem and offering solutions and

1:11:13

basically what lomborg did was take the ipcc climate report and accept its

1:11:18

prognostications on the global warming front as accurate now that doesn't necessarily mean he believes that or

1:11:24

that they are accurate but he was willing to start there and then he calculated with teams of

1:11:30

economists and i don't know how else that how the hell else you do it what the detrimental consequences for global gdp

1:11:38

would be as a consequence of the proposed climate change and then he

1:11:44

uh projected out what our wealth increase would be by the end of 2100 at

1:11:49

three percent or four percent a year growth which is about what we've averaged for the last 30 or 40 years

1:11:55

and he calculated how less rich we would be as a consequence so we'll be much richer than we are now

1:12:01

barring all the catastrophes that are man-made that we've been discussing but we'll be slightly less rich than we

1:12:07

would have been if there wouldn't be climate change and then lomborg lays out a number of things that we can do to

1:12:12

ameliorate the consequences of climate change but he goes farther than that he said look climate change is not actually the only

1:12:19

problem that we face there's a whole plethora of global problems which is part of the reason there's like 200

1:12:25

u.n sustainable development goals and it isn't obvious that we should be dumping trillions of dollars into climate change

1:12:31

amelioration when we have other problems to solve as well so he had 10 teams of economists rank order the world's

1:12:38

problems as outlined in no small part by the u.n and say look if we were going to donate resources if we're going to

1:12:45

devote resources to the amelioration of these serious problems what are the most serious problems and where can we get

1:12:52

the most bang for our buck and then he averaged across economists uh approximations of what the cost benefit

1:12:59

would be in addressing these issues and what he found was that most of the issues having to do with climate change

1:13:05

amelioration don't even meet the top 20. they're not even included in the top 20 for the things that we should be

1:13:11

concentrating on most and i read the lomberg's work and i thought well i've

1:13:16

never seen anyone do a more careful analysis of the entire situation than this does anybody have a counter-argument and

1:13:23

the counter-argument seems to be if you're not a true believer in the apocalyptic climate nightmare and if you

1:13:29

don't think that no uh measures no matter how dramatic are not even sufficient then you're

1:13:35

basically an agent of satan and i just don't regard that as a careful and nuanced argument i think it's a polling

1:13:42

and it's a reflection of the ignorance and luciferian pretensions of the globalist utopians and their absolute

1:13:49

inability of them of themselves to educate to become educated on this front

1:13:54

and so well sorry for the rant but jesus you know this is serious business

1:14:02

well now they're trying to shut down the bloody farmers it's like what the hell's going on here we actually need food

1:14:09

especially poor poor starving people remember them socialists aren't those the people that you're supposed to be on

1:14:14

the side of well all you're doing with your idiot utopian globalism and your environmental apocalypse

1:14:20

and your willingness to identify yourself as part of the moral elite because you care about the planet is

1:14:26

dooming well michael thinks a billion people to starvation

1:14:32

so what the hell how is that moral well you know the climate problem is so

1:14:37

serious that if we have to starve a few people to solve it it's like fair enough man let's say you're right well you're

1:14:42

not because as soon as you make people poor you make the environment worse period the end not

1:14:48

just a little bit worse way worse radically worse just wait till you see what happens to sri lanka on the on the

1:14:56

sustainable biological front so okay back to the dutch farmers so what's

1:15:03

going to happen in holland and what's going to happen in europe you said it's dependent on whether the bloody russians keep the taps off

1:15:10

what's going to happen i think about that approximately once an hour because

1:15:16

what's going to happen this is you know the system is emerging the energy is the lng is now cut off so a lot of these

1:15:23

things that are important right now might seem unimportant just one month from now if that energy is not turned

1:15:28

back on again because this is going to cause um an immediate cascade right and

1:15:34

yeah this summer will be over yesterday you know it was so hot here some places closed it was

1:15:41

only like 99 degrees of course i just came in from mexico so i'm good to go i sweat but i'm you know i'm from florida

1:15:46

right so i mean and so but they actually were closing some places here because it was too hot

1:15:52

and in some public transportation it it made me think you know this is actually kind of a minor challenge

1:15:58

this winter is going to be cold this is a very serious deal as you know

1:16:04

energy is a is a kill shot for food right i mean if there's not enough energy they're not going to be able to

1:16:10

create the fertilizer and transport the fertilizers that are neat we already saw a large fertilizer plant closed down in

1:16:15

norway and others as well that's just one of others uh well and you and ukraine and russia are major sources of

1:16:22

fertilizer production yes and china has just stopped their exports as well and and many others i mean this

1:16:29

is a this is a cascade and we're already it's almost like a kessler send them cascade here right i mean it's just uh

1:16:36

and at this point uh i think there's too much inertia to stop it at this point uh

1:16:42

there was i think we could have headed it off even a year ago if we suddenly had serious leadership uh

1:16:48

across and and we directly addressed wef if we had a president and a no we have

1:16:56

what we have is leadership who meet and then laugh about putin's shirtless photos that's what we have instead of

1:17:01

serious leadership yeah we have we have a pack of many issues uh the inertia is

1:17:06

too heavy at this point we're gonna we're going to see uh a lot of starvation and a lot of hop

1:17:12

human osmotic pressure the migration yeah and of course this leads to pandemic we'll have real pandemics

1:17:18

because again when you have many people starving they're uh first of all they start migrating and eating things they

1:17:24

don't normally eat and their immune systems are depressed anyway bottom line is every time you get big famines you

1:17:30

get big pandemics which will create more war we get that positive feedback loop well good then we can lock everybody

1:17:37

then we can lock everybody down again eh that'd be real fun we can lock everybody down again like they did in shanghai and

1:17:44

then we can disrupt the supply chains any even more and then we can starve a bunch more people and maybe we will

1:17:49

settle out with 600 million people and have a sustainable planet you know with all those 600 million people living in

1:17:56

the ashes and the skeletons and with baron baroness and apocalyptic nightmare everywhere around them that'll

1:18:02

be a hell of an outcome it's interesting because you know some people say hey that's apocalyptic

1:18:08

apocalyptic and doom and gloom and i say oh if you've looked at my work over the many years

1:18:13

you'll see i'm actually very measured i wouldn't say something like this because i i i know that my

1:18:19

many people depend on me to get things right so i research seven days a week travel the world talking with the right

1:18:25

people reading so many books you wouldn't believe and and i try to figure out what's going on which is difficult

1:18:32

uh and but i do have a good track record and i can see how the conditions are setting

1:18:38

it's not about sparks we see panama for instance going in the wrong direction at this point uh and that's obviously vital

1:18:44

panama canal uh we see uh you know issues between uh iran and uh israel

1:18:51

which could cause other energy issues nordstrom is cut we've had the explosions in texas and

1:18:58

and uh in oklahoma energy's gone and even if nordstrom were wide open uh

1:19:05

europa's got problem with energy this winter that's just a fact of life which means next year remember famine creates

1:19:12

famine next year we're not going to have enough fertilizer period we're eating the food that's already been grown at

1:19:17

this point so right now uh yeah so and we in addition to this normally we have a lot more resilience

1:19:24

for instance the droughts that we have in the united states okay we have terra we do have incredibly terrible droughts

1:19:30

right now in the united states normally we could kind of fill in the gaps and it's not going to be happy days but

1:19:35

we'll fill it out nobody's going to starve to death uh but now our resilience is reduced and so what you

1:19:41

know we're not going to be able to be sending food out to all over africa and these sorts of places without starving

1:19:47

our own people now keep in mind by the way during famines often countries like china were exporting huge amounts of

1:19:53

food while their own people were starving mao was doing that actually stalin did that when ukraine was starving and that's that's a

1:20:00

strange thing about famine some countries continue to export food while their people starve but that's a side topic well that is

1:20:07

what you do when you're aiming at starvation yeah well so you're a lot of fun to talk to jesus you're the you're

1:20:13

the major i don't know yeah yeah yeah you're that's an even more dismal conversation than the one i

1:20:19

would have with myself i would say well look michael thank you very much for talking to me today and enlightening me

1:20:25

and all of the people who are watching and listening about these preposterous and appalling occurrences i sure hope

1:20:31

you're deluded and wrong but i'm afraid you're probably not um and that's really

1:20:37

sad and horrifying and we're going to be lucky if we get through this winter without major bloody catastrophe as far

1:20:43

as i can tell on about five different fronts and these absolute abdication of leadership

1:20:49

in the west especially on the environmental front is right at the forefront of all of this and so all right for everyone who's listening i'm

1:20:55

going to continue to talk to michael behind the scenes so to speak at daily wire plus i've added that to my

1:21:03

youtube offering or my online social media offering let's say as part of this daily wire deal i have been talking to

1:21:10

all my guests for an additional half an hour or so about the development of their career michael's had an amazing

1:21:15

life i would say in in about five different dimensions and i i would like to ask him how his interests unfolded

1:21:23

and what pathway he followed and what his calling is to use a an

1:21:28

anachronistic biblical term and that's all offered at daily wire plus who have been kind enough to produce and film and

1:21:36

edit and help distribute and publicize all of this work that's also part of the daily wear plus deal which i think is a

1:21:42

good thing for everyone including me and hopefully the audience and so we're going to switch over to

1:21:47

the daily wire plus and if you want to support the work they're doing which is at least in part trying to

1:21:52

bring actual journalism back into the world so that people know that famine is coming for example um please give some

1:22:00

consideration to offering them some support you know uh we're hoping to make the daily wire plus

1:22:07

into a reliable alternative news source which means an

1:22:12

actual news source in today's world and um you know i don't know if we can manage it but that is our aim so michael

1:22:19

thank you very much for talking to me today that was uh extremely interesting in the most horrible possible way and uh

1:22:27

kudos on your adventurous spirit man and your courage in the face of all this god you have a ridiculous life

1:22:34

um it must be quite something to be trying to address these concerns conceptually and

1:22:40

in the practical way that you're doing it traveling and so forth and by by keeping your ear to the ground it's an

1:22:46

amazing thing that you're doing and so hopefully hopefully it's going to tilt us away from the four horsemen of the

1:22:52

apocalypse because they certainly seem to be on the march again and that's pretty bloody sad to say the least so

1:22:58

over and out everybody and michael uh as i said man thanks very much for going to

1:23:03

talk to me today thank you jordan it's been a pleasure and an honor thank you very much sir

1:23:11

i would encourage you to continue listening to my conversation with my guest on [dailywireplus.com](http://dailywireplus.com)

English (auto-generated)

## Description Section:

We are heading into one of the most epic famines in world history, where the poor will freeze in the dark and burn in the sun while they starve.

Michael Yon, one of America's youngest Green Berets at 19 years old, joins Dr Jordan B Peterson to discuss the current state of affairs across the globe. Michael has traveled and lived over half of his life abroad in more than 80 countries . Author of three books in the United States and three others in Japan, he is America's most experienced combat correspondent.
